

Children & Teens Hearing Loss Facts

Children in the United States

- There are **48 million Americans** who have a significant hearing loss. *(2011 National Health Interview Survey)*
- Approximately **2 to 3 out of every 1,000 children** in the United States are born deaf or hard of hearing. **9 out of every 10 children** who are born deaf are born to parents who can hear. *(National Institute on Deafness and Other Communication Disorders)*
- **98 percent** of U.S.-born infants are now screened for hearing loss usually before leaving the hospital. *(2016 CDC Hearing Screening and Follow-up Survey)*
- Since 2005, over **58 thousand** deaf and hard of hearing infants in the U.S. have been identified early. *(Center for Disease Control Prevention, National Center on Birth Defects and Developmental Disabilities.)*

In the United States...

- More than **22 million Americans** are exposed to damaging levels of noise. *(2016 National Institute of Occupational Health and Safety)*
- Hearing Loss ranks as the **third most common health issue** in the United States behind heart disease and arthritis. *(National Institutes of Health)*

- An estimated **1 in 5 American teens** experience some type of hearing loss. *(Hearing Loss Association of America)*
- **12.5% of children** between the ages of 6 and 19 have hearing loss as a result of listening to loud music, particularly through earbuds at unsafe volumes. *(Hearing Loss Association of America)*

In Kentucky...

- Nearly **700,000 deaf and hard of hearing** residents. *(2011 American Community Survey Data, United States Census)*
- Kentucky ranks **third per capita nationally** in people identified as deaf or hard of hearing. *(2010 American Community Survey Data, United States Census)*
